GOVERNMENT OF ANDHRA PRADESH STATE PROJECT DIRECTORATE – RUSA

From
Sri. G. S. Panda Das, IAS,
State Project Director, RUSA &
Special Commissioner, CCE & CTE,
A.P., Vijayawada.

To
The Principal,
All the beneficiary College under
Component 7 of RUSA
Andhra Pradesh

Lr. No.42/SPD/RUSA/2017, Dt:04/05/2017

Sir,

Sub: RUSA ,AP- Component No. 7 – Infrastructure Grants to Degree Colleges – Installation of Solar panels under equipment – reg.

I am to invite your attention to the subject cited above. Towards harnessing sources of green energy and to meet energy requirements of the institutions, the State Project Director, RUSA has been planning to install solar panels in all Government Degree Colleges under Component – 7 RUSA.

Besides the implementation and installation of solar panels envisages environment friendly practices for energy conservation. Hence the institutions should gear up to promote the ambience of creativity and innovation where shows a visible impact during institutional NAAC accreditation.

In this regard, **M/s WindStream Energy Technologies** which is empanelled with MNRE and NREDCAP for supply and installation of Grid Connected Solar Rooftop has been identified to provide solar equipment at various institutions. This company executes orders as per the rates specified by NREDCAP. The details of the eligible capacities with prices are as follows.

S.No	Category	Finalized Price (Rs/Watt)
1	6-10 KWp	71.00
2	11-50 KWp	70.00
3	51-100 KWp	69.00

Introduction of Grid Connected Solar Rooftop: Grid Tie Inverter Solar System with Net Metering is an solution consisting of a PV Module, Grid Tie Inverter, and Net Metering / Utility Meter. A grid-tie inverter is a power inverter that converts direct current (DC) electricity into alternating current (AC) with an ability to synchronize to interface with a utility line. When sun is shining, the solar panels generate power, which reduces the consumption of electricity from the grid and cuts electric bills accordingly. If this power is not enough for your College, the required balance is automatically

provided by the utility grid. If the solar panel system generates more electricity than your College is using, it will feed the excess back to the grid. This is special meter for net metering. Its applications are converting DC sources such as solar panels into AC for tying with the grid.

Features:

- Excess power generated can be exported back to grid.
- Efficient way to generate and use the solar power.
- Generate power can used to save the energy cost.
- Easy to install & use it.
- Roof top solution can be installed on the rooftop near Energy meter or Grid Distribution.
- Zero maintenance.
- Return on Investment will be closed to 3 to 4 years.
- No recurring cost.

Guidelines for installation of Solar Panels:

1. The vendors will visit the institution for site survey and assess the feasibility for installation of rooftop Solar panels. In this regard, the Principals are requested to assign one coordinator to assist the site survey.
2. After survey, the vendors will submit the estimations to colleges directly.
3. All Principals are requested to enter into an agreement with M/s WindStream Energy Technologies.
4. A proposal to be obtained from the vendor after conducting feasibility study at your college.
5. The total cost of the installation of Solar panel should not exceed Rs. 20,00,000 per college.

In this regard, all the beneficiary colleges of Component 7 under RUSA are requested to install Grid Connected Solar Rooftop. The Principals are also requested to pay from their RUSA funds under equipment head for establishment of solar panels.
