There are different forms of environmental pollution. Air pollution is caused by the burning of coal and oil. It can damage the earth's vegetation and cause respiratory problems in humans. A second type of pollution is noise pollution. It is the result of the noise of aircraft and heavy traffic. Further, loud music is also a cause of noise pollution, which has been seen to affect people's hearing and give them severe headaches and high blood pressure. Another source of pollution is radioactivity, which occurs when there is a leak from a nuclear power station. Radioactivity is a deadly pollutant, which kills and causes irreparable harm to those exposed to it. Land and water pollution is caused by the careless disposal of huge quantities of rubbish, sewage and chemical wastes. Pollution of rivers and seas kills fishes and other marine life and also becomes the cause of water-borne diseases. Land pollution, on the other hand, poisons the soil, making the food grown in it unfit for consumption.

B.Sc Microbiology Syllabus (w.e.f: 2020-21 A.Y)

The syllabus of B.Sc. MICROBIOLOGY (CBCS) revised by The APSCHE in 2020 has been reviewed by the undersigned BOS members of Microbiology, U.G Course, AKN University Rajahmundry.

The syllabi of five core courses (i.e. four semesters) have been approved with necessary corrections. Three core courses will be in the first three semesters, and the fourth and fifth courses will be in the fourth semester as tabulated in page no. 1. The major modifications (not exceeding 20%) made are listed below:

- I. *Microbial Physiology and Biochemistry* in semester II, the topics Extra chromosomal elements – plasmids have been shifted to unit V of the same course. Structure of ribosomes is deleted as it is covered in types of RNA Unit-I of the same course. In unit -V the topics plasmids(pBR322), cosmids, phasmids, lambda phage and M13 have been added. DNA polymerase have been deleted as it is covered in DNA replication.
- II. *Medical Microbiology and immunology* in semester IV, Unit III the topic Hepatitis A is replaced with Corona virus. RT PCR is introduced in Unit -IV. In unit-IV identification by biochemical characteristics is limited to IMViC. Normal flora of human body (Hands, Feet, Nostrils, Teeth Surface) & Effectiveness of Hand Sanitizers by Filter Paper Disc Method& Thumb impression method.
- III. In the Course *Microbial Ecology and Industrial Microbiology* the topic strain improvement is added instead of techniques involved in selection of industrial important metabolites from microbes as this is more suitable for the course. In unit-IV general composition of fermentation media (Carbon source, nitrogen source, minerals, vitamins & growth factors, Buffers, Precursors, Antifoam agents, water, oxygen) is introduced.
- IV. In the practical Course *Microbial Ecology and Industrial Microbiology* the following list of practicals are introduced
 - Isolation of microorganism from soil
 - MPN test
 - Isolation of food spoilage microorganisms from spoiled food samples
 - Crowded plate technique
 - Preparation of yoghurt
 - Production of single cell protein (any bacterial and fungal cultured dry mass)
 - Isolation of microorganism from different water samples
